

Asidosis Respiratorik

@elza_amelía

Asídosis:

Kondísí pH darah drop díbawah normal (7,35-7,45)

Asídosís

- Respiratorik
 (Akut, Kronis)
- Metabolík
 (Deabetík, laktík, Híperchloremík)

Most Common Causes of A. respiratorik

- 1. PPOK
- 2. Asma
- 3. Emfisema

Most Common

causes of A. metabolic

- 1. Hiperglicemia
- 2. Diare
- 3. Gagal ginjal

Range normal AGD

- 1. PH 7,35-7,45
- 2. HCO3 22-26
- 3. PCO2 35-45

Cenderung Asídosís

7,35-7,39 Cenderung Alkalosís 7,40-7,45

Gejala Asidosis

Tn.R, 70 Yo

Sesak napas sejak 2 jam lalu. Riwayat batuk berdahak sejak lama, tanpa demam. Riwayat sesak sudah lama dan bertambah berat, meberat dg aktifitas. Riwayat HT+, DM-, merokok+.
